

December 2011 = 90.1  
 1990 - YTD avg. = 97.3  
 1990 - 2007 avg. = 98.4  
 2008 - 2010 avg. = 93.8  
 2011 - YTD avg. = 89.2

\* Based on Clark County's employment-to-workforce ratio (Nevada Department of Employment, Training and Rehabilitation). Indexed to a baseline of 100 in Dec. 1998.

RCG's December 2011 **Clark County** (Nevada) **Job Index** of 90.1 shows a slight uptick from November's 89.9. This is largely the result of the local labor force shrinking faster than the rate of job creation. Compared to December 2010's 88.3, the latest **Job Index** has improved by 1.8 points. What this tells us is that the Clark County economy continues along shallow recovery glide path, and that a return to the pre-recession (1990-2007) average **Job Index** of 98.4 will take some time.
